WEED MANAGEMENT SOLUTIONS

**DUAL GOLD® label extension gives Roundup Ready Flex® growers more options for weed control**

Cotton growers will no longer be restricted to using DUAL GOLD® in a pre-emergent usage pattern, providing considerably more flexibility.

DUAL GOLD is now registered for use over-the-top on Roundup Ready Flex® cotton. In this use pattern growers can opt for an application of Roundup Ready® Herbicide with PLANTSHIELD® by Monsanto in a mix with DUAL GOLD, helping prevent problem weeds from emerging.

If desired, growers can still apply DUAL GOLD post-plant, pre-crop emergence, but the over-the-top registration will enable those growers who have crop sensitivity concerns to switch to this new use-pattern. As DUAL GOLD is a group K, it offers an alternative mode of action helping control weeds before they emerge, while helping preserve glyphosate as part of an integrated weed management program.

The label extension also gives growers the choice to use DUAL GOLD in-fallow for hard to control grass weeds such as Feathertop Rhodes Grass, providing a flexible pre-emergent option, especially when combined with a knockdown herbicide like GRAMOXONE® 360 PRO or glyphosate.

As per industry guidelines, always follow label directions when using crop protection products and remember to rotate chemistry, as part of a herbicide resistance management strategy, to maintain the effectiveness of all herbicides.
